Abstract - The literature in the field of Sports Medicine and identified significant journals and their countries were studied. A total of 43727 records on 'Sports Medicine' is covered in the MEDLINE database. 50.69% of records were journal articles in this study. Bradford Law has been used for this study and found significant journals in the field of Sports Medicine. The United States is dominated in the first rank and also covered fourth to eighth ranks and tenth rank in the study. The United States with the major publications of 62.5% of output in zone-1 study, which is in the first position followed by Germany, Denmark, England, Italy, and Turkey. In zone-2 study, the United States shared 40.6% in the first position followed by England, Switzerland, and Germany etc. In zone-1 and zone-2 combined study; it shows that United States shared 42.86% followed by England in the second position, Germany and Switzerland shared the third position, the Netherlands in the fourth position, and China in the fifth position.

Keywords: Sports Medicine, Bradford's Law and Significant Journals

I. INTRODUCTION

Bibliometrics is the calculation of bibliographical details and it helps in Library Science research in the past 30 years. Scientific indicators depend on publication and citation statistics and other, more Bibliometric Indicators. These types of studies help to calculate research performance of a scientific field with the help of bibliometrics. In this study, an attempt has been made to identify the significant journals in the field of Sports Medicine and also to study its place of publication.

II. REVIEW OF LITERATURE

The studies on mapping have analyzed journal citations to determine lists of significant journals in their fields; Schloman [1] analyze the mapping the literature of allied health, Walcott [2] in diagnostic medical sonography, Smith³ in dietetics, Burnham [4] in respiratory therapy, Slater⁵ in speech-language pathology, Burnham [6] in radiologic technology, and Delwiche [7] in clinical laboratory science. Ramesh Babu and Ramakrishnan [8] studied Indian Contributions to the field of HIV/AIDS. Ramakrishnan and Thavamani [9&10] studied Hepatitis-C and Leptospirosis and Ramakrishnan, Ravisankar and Thavamani^{11&12} studied in the Fields of Breast Cancer and Dengue Literature and found important journals in their

subjects. The review of literature on significant journal analysis shows that so far no quantitative study on "Sports Medicine" was shown. So the present study may help to identify the significant journals in the field of Sports Medicine.

III. SPORTS MEDICINE

Sports medicine is a one of the studies of medicine which deals with physical fitness and also to treat and prevent of injuries related to sports and exercise. In some countries, Sports medicine is a recognized medical field, whereas in other countries it is a special interest area but not an actual specialty [13].

IV. OBJECTIVES OF THE STUDY

The objectives of this study are

1. To study the quantum of literature published.
2. To identify the significant journals and its place of publications.

V. METHODOLOGY

The records published from the year 1999 to 2018 in the field of Sports Medicine in the MEDLINE data which are covered in the PubMed [14] were searched and the details were saved as text file. The saved text file were changed into FoxPro and loaded in SPSS for the purpose of this study. The keyword 'Sports Medicine' has been used to get the number of records available in the database. The data collected from the MEDLINE database on the literary production of 'Sports Medicine' has been analysed by using bibliometric indicator such as Bradford's Law of Scattering [15].

VI. SPORTS MEDICINE RESEARCH PRODUCTIVITY

The research productivity in the field of Sports Medicine literature is presented in Table I. A total of 43727 records on Sports Medicine literature are covered in this study. A period of twenty years i.e. 1999 to 2018 were covered. The

Year-wise distribution of literature on Sports Medicine shows that the maximum number of records (6569) was published in the year 2018, followed by 5502 in the year

2017 and 5001 in the year 2016. The whole study, it shows that from the year 1999 onward there is a steady increase of Sports Medicine research publications every year. (Fig.1)

TABLE I LITERATURE PUBLISHED IN SPORTS MEDICINE

Sl. No.	Year	Frequency	%	Cumulative %
1	1999	651	1.5	1.5
2	2000	772	1.8	3.3
3	2001	830	1.9	5.2
4	2002	924	2.1	7.3
5	2003	996	2.3	9.5
6	2004	1054	2.4	12

VII. TYPES OF PUBLICATIONS IN SPORTS MEDICINE RESEARCH

The distribution of the 'Sports Medicine' research output according to various publication types of MEDLINE is given in the Table I. 50.69% of the study is journal articles, 18.37% is Research Support, Non-U.S. Gov't and 14.17% is Review. Other publication types such as Randomized Controlled Trial, Systematic Review, Editorial, Comment, Research Support, N.I.H., Extramural, Validation Studies,

Research Support, U.S. Gov't Non-P.H.S., Research Support, U.S. Gov't P.H.S., Observational Study, Letter, Case Reports, Multi-center Study, Introductory Journal Article, Published Erratum, Portrait, Meta-Analysis, Practice Guideline, News, Video-Audio Media, Congress, Overall, Retracted Publication, Interview, Twin Study, Lecture, Historical Article, Research Support, N.I.H., Intramural, Technical Report, Address, etc. is 16.77%. (Fig. 2)

TABLE II TYPES OF PUBLICATIONS IN SPORTS MEDICINE RESEARCH

Sl. No.	Type of Publication	No. of records	%	Cumulative %
1	Journal Article	22166	50.69	
2	Research Support, Non-U.S. Gov't	8031	18.37	69.06
3	Review	6196	14.17	83.23
4	Randomized Controlled Trial	1373	3.14	86.37
5	Systematic Review	1113	2.55	88.91
6	Editorial	857	1.96	90.87

	Total	43727	100.00	

Fig. 2 Types of Publications in Sports Medicine Research

VIII. JOURNALS DISTRIBUTION IN SPORTS MEDICINE

In the Bradford Law, the journals covered journal articles are grouped into three zones producing a similar number of journal articles. The distribution of the journals by zone-wise is presented in the Table III. It also shows that 16 significant journals grouped in zone-1 published 7614 journal articles and produced one-third of the total output and in the second zone comprises 138 journals published in 7388 journal articles and 2532 journals published 7164 journal articles grouped in the third zone. (Fig. 3)

TABLE III JOURNALS DISTRIBUTION BY ZONE AS PER BRADFORD LAW

Sl. No.	Zone	No. of Journals		No. of journal articles	
		No.	(%)	No.	(%)
1	Zone 1	16	0.60	7614	34.35
2	Zone 2	138	5.14	7388	33.33
3	Zone 3	2532	94.27	7164	32.32
	Total	2686	100.00	22166	100.00

Fig. 3 Distribution of Journals by Zones

IX. SIGNIFICANT JOURNALS IN SPORTS MEDICINE RESEARCH

There are 154 numbers of journals covered in Zone-1 and Zone-2. Those 154 journals are recognized as significant journals in the field of Sports Medicine. Significant journals along with the country of origin based on the research publications on Sports Medicine in the study period have been presented in Table IV. There are 2686 journals that contributed 22166 journal articles in this study as per

Bradford Law. The significant journals up to ten ranks are as follows:

1. 'The American Journal of Sports Medicine' published in the United States with 1393 contributions amounting to 6.28% of total contributions.
2. 'Knee Surgery, Sports Traumatology, Arthroscopy' published in Germany with 1119 contributions amounting to 5.05%.
3. 'British Journal of Sports Medicine' published in England with 685 contributions amounting to 3.09%.
4. 'Arthroscopy: The Journal of Arthroscopic & Related Surgery' published in United States with 624 contributions amounting to 2.82%.
5. 'Orthopaedic Journal of Sports Medicine' published in the United States with 484 contributions amounting to 2.18%.
6. 'Clinical Journal of Sport Medicine' published in the United States with 405 contributions amounting to 1.83%.
7. 'Orthopaedic Journal of Sports Medicine' published in the United States with 364 contributions amounting to 1.64%.
8. 'Current Sports Medicine Reports' published in the United States with 335 contributions amounting to 1.51%.
9. 'The Journal of Sports Medicine and Physical Fitness' published in Italy with 317 contributions amounting to 1.43%.
10. 'Journal of Strength and Conditioning Research' published in the United States with 298 contributions amounting to 1.34%.

The United States is dominated in the first rank and also fourth to eighth rank and tenth rank in the first top ten journals covered in the study of Sports Medicine. But the second rank goes to Germany; the third rank goes to England and Italy in the ninth rank in this study.

TABLE IV SIGNIFICANT JOURNALS IN SPORTS MEDICINE

Sl. No.	Journal	No. of Records	%	Country
1	The American Journal of Sports Medicine	1393	6.28	United States
2	Knee Surgery, Sports Traumatology, Arthroscopy	1119	5.05	Germany

A. Journals by Country-Wise in Zones

The distribution of journals by country of origin in zones 1 and 2 are presented in the Tables V, VI and combined of Zone 1 & Zone 2 journals in Table VII respectively.

B. Journals by Country in the First Zone

The United States with the major contributions, shared 62.5% of total output in zone-1 in the first position; followed by Germany shared 12.5% in the second position. The other countries like Denmark, England, Italy, and Turkey, each shared 6.25% in the third position. (Fig.4)

TABLE V JOURNALS BY COUNTRY IN THE FIRST ZONE

Sl. No.	Country of origin	Total No. of Journals	%	Cumulative Total	Cumulative %	Rank
1	United States	10	62.5	10	62.5	1
2	Germany	2	12.5	12	75	2
3	Denmark	1	6.25	13	81.25	3
4	England	1	6.25	14	87.5	3
5	Italy	1	6.25	15	93.75	3
6	Turkey	1	6.25	16	100	3
Total		16	100			

Fig. 4 Journals by Country in the First Zone

X. JOURNALS BY COUNTRY IN THE SECOND ZONE

The distributions of journals by country of origin in zone-2 are presented in Table VI. The United States shared 40.6% (56 journals) in the first position; followed by England shared 23.91% in second position, Switzerland shared 7.25% in third position, Germany shared 5.82% in fourth position, Netherlands shared 4.35% in the fifth position, China shared 2.9% in sixth position, Australia, Japan, Korea (South), New Zealand, and Poland each shared 1.45% in the seventh position, and Brazil, Canada, Denmark, France, India, Iran, Italy, Russia (Federation), Scotland, Singapore, and Turkey each shared 0.72% in the eighth position. (Fig.5)

XI. COUNTRIES IN THE COMBINED OF FIRST & SECOND ZONES

The distribution of journals by country of origin in zone-1 and zone-2 combined are presented in the Table VII. It also

shows that the United States shared 42.86% journals followed; by England shared 22.06% in the second position,

Germany and Switzerland shared 6.49% each in the third position, the Netherlands shared 3.9% in the fourth position, China shared 2.6% in the fifth position, Australia, Denmark, Italy, Japan, Korea (South), New Zealand, Poland, and Turkey each shared 1.3% in the sixth position, Brazil, Canada, France, India, Iran, Russia (Federation), Scotland, and Singapore each shared 0.65% in the seventh position. (Fig.6)

It reveals that these countries are the significant producers of literature on Sports Medicine. The trend may be understood as the research on Sports Medicine may be concentrated in these countries. Probably MEDLINE database has covered more journals published in the branch of Sports Medicine from these countries.

Fig. 5 Journals by Country in the Zone-2

TABLE VI JOURNALS BY COUNTRY IN THE SECOND ZONE

Sl. No.	Country of origin	Total No. of Journals	%	Cumulative Total	Cumulative %	Rank

XII. COUNTRIES IN THE COMBINED OF FIRST AND SECOND ZONES

The distribution of journals by country of origin in zone-1 and zone-2 combined are presented in the Table VII. It also shows that the United States shared 42.86% journals followed; by England shared 22.06% in the second position, Germany and Switzerland shared 6.49% each in the third position, the Netherlands shared 3.9% in the fourth position, China shared 2.6% in the fifth position, Australia, Denmark, Italy, Japan, Korea (South), New Zealand, Poland, and Turkey each shared 1.3% in the sixth position, Brazil, Canada, France, India, Iran, Russia (Federation), Scotland, and Singapore each shared 0.65% in the seventh position. (Fig.6)

It reveals that these countries are the significant producers of literature on Sports Medicine. The trend may be understood as the research on Sports Medicine may be concentrated in these countries. Probably MEDLINE database has covered more journals published in the branch of Sports Medicine from these countries.

Fig. 6 Journals by Country in Zone-1 and Zone 2 Combined

TABLE VII JOURNALS BY COUNTRY IN THE COMBINED OF 1ST & 2ND ZONES

Sl. No.	Country	No. of Journals	%	Cumulative Total	Cumulative %	Rank
1	United States	66	42.86	66	42.86	1
2	England	34	22.06	100	64.92	2
3	Germany	10	6.49	110	71.41	3
4	Switzerland	10	6.49	120	77.9	3
5	Netherlands	6	3.9	126	81.8	4
6	China	4	2.6	130	84.4	5
7	Australia	2	1.3	132	85.7	6
8	Denmark	2	1.3	134	87	6
9	Italy	2	1.3	136	88.3	6
10	Japan	2	1.3	138	89.6	6
11	Korea (South)	2	1.3	140	90.9	6
12	New Zealand	2	1.3	142	92.2	6
13	Poland	2	1.3	144	93.5	6
14	Turkey	2	1.3	146	94.8	6
15	Brazil	1	0.65	147	95.45	7
16	Canada	1	0.65	148	96.1	7
17	France	1	0.65	149	96.75	7
18	India	1	0.65	150	97.4	7
19	Iran	1	0.65	151	98.05	7
20	Russia (Federation)	1	0.65	152	98.7	7
21	Scotland	1	0.65	153	99.35	7
22	Singapore	1	0.65	154	100	7
Total		154	100.00			

XIII. CONCLUSION

In the study of medicine, the results display that Sports Medicine literature is growing year after year. It also displays the maximum number of records covered by journal articles in MEDLINE in the field of Sports Medicine. The United States records on Sports Medicine literature covered maximum numbers followed by England. Further, the research productivity of Sports Medicine confirms the implications of Bradford's Law of Scattering.
